Comments on **Docket 25-133 (DA 25-219)**

To Whom it may concern, my personal and professional opinion is the FCC should preserve ALL current frequency allocations and maintain tiered licensing for the Amateur bands,

It is also my opinion that all current FRS and GMRS licensing and rules should remain the same

- Cost-benefit considerations, there are no cost considerations for the FCC to remove or alter current fees for these services. Current licensing costs are well within the ability of the common person to get and maintain current licensing.
- Marketplace and technological changes, Current designs are acceptable, however the rules should be clearer on the use of part 90 radios in the part 95 GMRS service, Since Part 90 radios are more tightly controlled for acceptance, they should be explicitly allowed for GMRS.
- Regulation as barrier to entry to the communications marketplace, The GMRS band should be increased, additional channels for repeater operation should be added to allow for repeater linking which is currently not allowed and specific language added to keep the existing channels as un-linked stand-alone system.
- Changes in the broader regulatory context, other considerations relevant to the retrospective review of Commission rules, Additional language needs added to the GMRS code to explicitly exclude all repeater interconnections to other radio systems or repeaters, Current rule wording is inadequate and is being interpreted incorrectly in some states.

Thank You for your consideration
